Paediatric Consultation Assessment Tool

Use ONE copy per consultation.

On this page, score the clinician's diagnostic and management skills, and give details of the consultation, the clinician and yourself.

Overleaf, make judgments about the skills the clinician uses to communicate with the child and his/her carers. Where indicated, and whenever the patient is able to contribute to the conversation, evaluate the skills used with child and parent/s *separately*. Score individual skills by filling in the boxes, then use these marks to guide your overall scores.

The overall scores will be used for analysis, but the information in the boxes will be used to give feedback to the clinician.

Content Skills	1:	Comments						
Gathers relevant essential information	1	2	3	4	5	6	7	
Undertakes pertinent examination	1	2	3	4	5	6	7	
Generates appropriate diagnosis	1	2	3	4	5	6	7	
Formulates relevant management plan	1	2	3	4	5	6	7	

Consultation

Nature of consultation
Diagnosis / Diagnoses
Difficulty of case discussed during consultation
Age of child
Length of consultation (minutes)
Other people present (eg relatives, medical students, other health care professionals)
Other relevant information (eg use of equipment during consultation, interruptions, problems)
Consultation consecutive with one before

New	Follow-	up
